

HI! MY NAME IS:

I have Becker muscular dystrophy. This is a rare genetic disorder that makes my muscles progressively weaker over time. Becker is something I was born with and is not contagious. Becker also affects other systems in my body including my heart and lungs, and sometimes the way I learn & behave. Because I have Becker, I may get tired more easily or need help with certain things. If you see me struggling, please ask how you can help! There are a few other things I want you to know about me so we can have the best school year:
